The Water Harvester

Zvishavane in southern Zimbabwe is an arid terrain where small-scale farmers struggle with fragile soils and erratic rainfall, and water is a supremely precious natural resource. Yet it was here that peasant farmer Zephaniah Phiri had the wisdom, vision and strength of character to transform a resource-starved subsistence plot into a fertile smallholding. This book is his true story. More than a simple environmental story, *The Water Harvester* reveals the survival strategies and character of a man with immense courage, wisdom and generosity.
